

DaniniHub – radni kontekst za novi chat

Trenutni status

Stripe/Brevo aktivacioni tok je stabilizovan i ne treba ga dirati bez konkretnog dokaza o grešci.

Verifikovan lanac:

- Stripe Checkout session prelazi u `complete`.
- `payment_status` je `paid`.
- Aktivacija startuje.
- Controller generiše i odobrava artifact.
- JSON artifact se kreira.
- PDF report se kreira.
- Email HTML se kreira.
- Brevo transactional email se šalje i vraća `message_id`.
- Success page prikazuje completed stanje.
- PDF download route vraća HTTP 200.
- Paid-session recovery radi ako lokalni webhook propusti event.
- Recovery zapis se persistira u `logs/stripe_processed/recovered_<SESSION_ID>.json`.

Stabilni fajlovi / rute

Glavni runtime:

- `server/stripe-webhook.js`
- `core/activation-from-stripe.js`
- `core/contracts/activation-pack-contract.js`
- `core/controller.js`
- `core/send-artifact-email.js`

Relevantne rute:

- `GET /success?session_id=...`
- `GET /activation/status?session_id=...`
- `GET /activation/download/pdf?run_id=...`
- `POST /webhook`

Relevantni npm scriptovi:

- `npm run webhook:stripe`
- `npm run stripe:checkout:test`
- `npm run stripe:status`
- `npm run audit:last -- 25`
- `npm run test:pdf`
- `npm run check:syntax`

Napomena: ne postoji `npm run checkout:test`; ispravno je `npm run stripe:checkout:test`.

Rešeni problemi

- `saveArtifactEmailHtml` is not a function
- `outputs/email/undefined.html`
- `artifact.run_id` missing
- `customer_email` is not defined
- missing Brevo sender email
- success page ostaje na `processing` kada webhook event nije obrađen lokalno
- pogrešan recovery function reference: `findRecoveredBySessionId` → `findRecoveredActivationBySessionId`
- lokalni paid session nije bio persistiran u `logs/stripe_processed`
- pogrešan script poziv `checkout:test`
- potencijalni `.join('\n')` / line-break problem u `core/contracts/activation-pack-contract.js` je zakrpljen i `node --check` prolazi

Milestone dokument

Stabilnost Stripe/Brevo toka je zapisana u:

```
docs/operations/milestones/20260505_stripe_activation_email_sent_stable.md
```

Taj dokument je očišćen od dupliranih sekcija i sadrži sledeći fokus:

- infrastruktura je stabilna
- sledeći milestone nije Stripe
- sledeći milestone je kvalitet 7 EUR artifact-a

Product docs kreirani

Kreirana je struktura:

- `docs/products/premium-ebook/OUTLINE.md`
- `docs/products/premium-ebook/DRAFT.md`
- `docs/products/premium-ebook/README.md`
- `docs/products/bonus-report/OUTLINE.md`
- `docs/products/bonus-report/DRAFT.md`
- `docs/products/bonus-report/README.md`
- `docs/products/activation-preview/PREVIEW_BLOCK.md`
- `docs/products/activation-preview/README.md`
- `docs/products/TASK_CREATE_PREMIUM_AND_BONUS.md`

Važna napomena: `TASK_CREATE_PREMIUM_AND_BONUS.md` sme da sadrži zabranjene fraze samo kao validaciona pravila, ali generisani product docs i 7 EUR output ne smeju.

Validacija product docs:

```
cd ~/daninihub || exit 1
```

```
grep -RIn "V1 SKELET\|149 €\|buy now\|jetzt kaufen\|kupite"
```

```
docs/products
--exclude='TASK_CREATE_PREMIUM_AND_BONUS.md' || true
```

Očekivano: bez rezultata.

7 EUR Activation Artifact – obavezni blokovi

7 EUR artifact mora biti realan, trenutni, višjejezični i upotrebljiv, ne generički AI sažetak.

Obavezno sadrži:

1. Project snapshot
2. Current clarity score
3. Gate status
4. Three key contradictions / 3 zentrale Widersprüche / 3 ključne kontradikcije
5. Three next steps for seven days / 7-dnevni operativni plan
6. STOP / REDEFINE / GO logic
7. Dialogue and analysis
8. Diskretan Premium E-Book / Bonus Report mockup preview
9. AI transparency
10. Human-in-the-loop responsibility block
11. No legal, financial, tax or medical advice disclaimer

Ne sme da sadrži:

- agresivan CTA
- direktnu prodaju
- “buy now” / “jetzt kaufen” / “kupite”
- guranje cene
- 149 € u 7 EUR preview delu
- V1 SKELET
- generički teaser jezik
- internu agent logiku
- Node implementaciju
- token logiku
- privatnu arhitekturu

Contract trenutno stanje

U `core/contracts/activation-pack-contract.js` label-e su preusmerene tako da stari placeholder nazivi ne znače više “prodajni outline”, nego korisne artifact blokove:

- `premiumOutline` → 3 zentrale Widersprüche / 3 ključne kontradikcije / 3 key contradictions
- `bonusOutline` → Operativer Fokus / Operativni fokus / Operational Focus
- `quietCalls` → Optionale Vertiefung / Opciona produbljena analiza / Optional Deepening

Relevantne funkcije u contract-u:

- `buildProjectSnapshot(...)`
- `buildClarityScore(...)`
- `buildGateStatus(...)`
- `buildContradictions(locale)`
- `buildSevenDayPlan(locale)`
- `buildDecisionLogic(locale)`
- `buildOptionalDeepening(locale)`
- `buildResponsibilityBlock(locale)`
- `buildOperationalFocus(locale, sections)`
- `buildActivationPack(artifact)`

`buildActivationPack()` sada mapira:

- `dialogue` → customer-facing cleaned raw input
- `analysis` → Project snapshot
- `positives` → Clarity score
- `negatives` → Gate status
- `recommendation` → GO / REDEFINE / STOP logic
- `nextSteps` → 7-day plan
- `premiumOutline` → contradictions
- `bonusOutline` → operational focus
- `quietCalls` → discreet preview from `docs/products/activation-preview/`
`PREVIEW_BLOCK.md`
- `disclaimers` → responsibility block

Poslednja uspešna provera contract-a

Komanda:

```
cd ~/daninihub || exit 1

node --check core/contracts/activation-pack-contract.js

grep -n "buildProjectSnapshot\|buildClarityScore\|buildGateStatus\|
buildContradictions\|buildSevenDayPlan\|buildDecisionLogic\|
buildOptionalDeepening\|buildResponsibilityBlock"
core/contracts/activation-pack-contract.js

grep -RIn "V1 SKELET\|149 €\|buy now\|jetzt kaufen\|kupite"
docs/products
--exclude='TASK_CREATE_PREMIUM_AND_BONUS.md' || true
```

Rezultat:

- `node --check` prolazi
- funkcije postoje
- forbidden wording u product docs nije pronađen

Problem koji se pojavio pri testu

Za poslednji test session:

```
cs_test_a1lfd0l0L0Q9aiNReuogyoep4XBPuPCubq6Ik8Koon0Z7gxYqEAexeHEwf
```

Stripe API kaže:

- status: complete
- payment_status: paid
- success_url: https://daninihub.com/success?session_id={CHECKOUT_SESSION_ID}
- customer_email: danininet@gmail.com

Ali lokalni poziv:

```
curl -s "http://localhost:4242/activation/status?session_id=$SESSION_ID" |  
python3 -m json.tool
```

vratio je:

```
Expecting value: line 1 column 1 (char 0)
```

To znači da lokalni `curl` nije dobio JSON. Najverovatnije je lokalni server na portu 4242 bio ugašen, pa je response bio prazan ili HTML/error, a ne JSON. Ne zaključivati odmah da je Stripe/Brevo tok pokvaren.

Prvi sledeći korak je proveriti runtime server i log:

```
cd ~/daninihub || exit 1  
  
ss -ltnp | grep ':4242' || true  
  
tail -n 80 logs/stripe-webhook-runtime.log || true  
  
nohup npm run webhook:stripe > logs/stripe-webhook-runtime.log 2>&1 &  
sleep 4  
  
tail -n 40 logs/stripe-webhook-runtime.log
```

Zatim ponoviti status test bez pipe-a u `json.tool` da vidimo raw output:

```
SESSION_ID="cs_test_a1lfd0l0L0Q9aiNReuogyoep4XBPuPCubq6Ik8Koon0Z7gxYqEAexeHEwf"  
  
curl -i "http://localhost:4242/activation/status?session_id=$SESSION_ID"
```

Ako je HTTP 200 JSON, tek onda:

```
curl -s "http://localhost:4242/activation/status?session_id=$SESSION_ID" |  
python3 -m json.tool
```

Radni princip za nastavak

Ne raditi više kroz predugačak chat.

Za novi chat poslati:

1. ovaj canvas / radni kontekst
2. poslednji terminal izlaz
3. konkretan sledeći cilj

Sledeći cilj:

- ne dirati Stripe/Brevo stabilni tok
- popraviti ili verifikovati runtime ako port 4242 ne vraća JSON
- testirati novi 7 EUR PDF sadržaj
- potvrditi da PDF sadrži realne blokove: snapshot, clarity score, gate, kontradikcije, 7 dana, GO/REDEFINE/STOP, diskretan preview, disclaimer

Minimalni sledeći terminal paket

```
cd ~/daninihub || exit 1  
  
SESSION_ID="cs_test_a11fd010L0Q9aiNReuogyoep4XBPuPCubq6Ik8Koon0Z7gxYqEAexeHEwf"  
  
echo "=== PORT ==="  
ss -ltnp | grep ':4242' || true  
  
echo  
  
echo "=== SERVER LOG ==="  
tail -n 80 logs/stripe-webhook-runtime.log || true  
  
echo  
  
echo "=== RAW STATUS ==="  
curl -i "http://localhost:4242/activation/status?session_id=$SESSION_ID"  
  
echo  
  
echo "=== AUDIT LAST ==="  
npm run audit:last -- 30
```
